

Press-Off Fixture

Application

Place the face side roller on the press-off fixture in such a manner that the lever is positioned at approximately 60 degrees, as shown in the photo.
(For different hub widths).

Clamp the press-off fixture between bar and rim, as shown in the illustration.

Press the lever down so that the rim is pushed away laterally.

Turn the wheel under preliminary-tension 1-2 times.

Repeat the process on the opposite side.

True the wheel again, and repeat the process until the desired spoke tension has been achieved.
